GEODIS Opens New Freight Forwarding Office in the Philippines

GEODIS opens new Freight Forwarding office in the Philippines strengthening its presence in the country to support customers' growing supply chain needs. This expansion offers air and ocean freight, project logistics and supply chain management services, providing direct access to GEODIS's global network as the country attracts record investment in key industries.

GEODIS, a world leader in transport and logistics, has opened this summer its first-owned Freight Forwarding office in the Philippines, establishing a direct local presence to support customers as they expand their operations and supply chains in the country.

Located in Manila, the new office will provide freight forwarding services, including air and ocean freight, project logistics and supply chain optimization. Transitioning from an agent model, GEODIS' presence will provide the highest standard of customer support with local expertise and accountability. Customers will now get direct access to GEODIS's international network, gaining greater control, transparency, and enhanced end-to-end visibility over their supply chains.

The development comes as the Philippines attracts new and expanding investment, particularly in the manufacturing, technology and other higher-value industries and strengthens its position in regional and global supply chains.

The Philippine Economic Zone Authority (PEZA) approved PHP151.9 billion in new and expansion projects in the first seven months of 2026, up 67% year-on-year. The projects are expected to generate US\$5.9 billion in exports, mainly from manufacturing. Renewable energy is also attracting investment, accounting for nearly all Green Lane-approved investment in the first half of 2026. Philippine trade flows have continued to accelerate in 2026. Total external trade in goods reached a record US\$218.68 billion in 2025, up 8.9% year on year.

"The Philippines is becoming an increasingly important market for high-value manufacturing and technology supply chains, and the growth we're seeing in trade and investment is creating greater demand for reliable international freight capacity and supply chain visibility," said Eric Martin-Neuville, Regional President & CEO, Asia Pacific & Middle East, GEODIS. "Moving from an agent model to our own operation gives us greater control over the service we provide and puts our people
